

Daniel's word document

10 pts - HW01 Home Page *

Jan 28 at 9:57am

-1 does not use external style sheet -2 inadequate database table proposal. The table should have fields for data relevant to the purpose of the website. -0.25 view page source shows html errors.

- Daniel Eap

- I Fixed the database proposal and data fields to match it.

10 pts - HW02 Database

Feb 5 at 6:13pm

Please come to a precise conclusion on the purpose of the website.

- Daniel Eap

Feb 5 at 7:08pm

-3 other table does not match the website purpose. "The goal is to provide resources that give a breif summary on modern fantasy's history as well as tropes in the genere." There are no fields related to history/summaries/tropes. -3 other table represents people: "world_user_name", "world_user_password". -0.5 missing ORDER BY clause in select statements. -0.25 Unprofessional looking web page. Please fix the styling on your list items under "Database Table" -1.5 lateness

- Sally Kyvernitis

- I adjusted the purpose of the website and altered the fields accordingly. I also changed the ORDER BY clause in the select statements.

10 pts - HW03 Single Page Application

Feb 12 at 8:48pm

-0.5 link to server side "hello world" page does not work. it shouldn't go to a hello.html. -0.5 styling too similar to sample code. Specifically the dropdown, make it your own.

- Sally Kyvernitis

- I fixed the server side hello world page (It was an issue with a few links because I added files and folders from example code for a wider breadth of icons and images).

10 pts - HW04 Components

Mar 12 at 1:28pm

-3 No third list component for both JS and React -1 Does not use a make function for both JS and React (you only have makeList, you need both) -1 First lists should have two objects at least. One complete, one empty object -0.5 wrong link provided -2 lateness

- Daniel Eap

- I added the third list component for JS and React and it now uses the make function for both JS and react. Unsure if the empty object counts as it is set to default, "empty" fields.

10 pts - HW05 Web APIs

-1: Your web_user data does not have at least one record with all nullable non character fields (membership fee and birthday). To avoid deductions on future HWs for this, please fix your data asap. We need to know that your code can read null values from the database without a problem. -2 lateness

- Daniel Eap

- Web_user data now has a record with all nullable non character fields (at least it should unless deleted or updated by modules 9 and 10).
