Tim's word document

10 pts - HW06 ShowData

Mar 23 at 4:53pm

Web User ShowData component -0.5: does not show the data sorted by the leftmost column initially. Other ShowData component -0.5: does not show the data sorted by the leftmost column initially. -1: "other" data does not show at least one non key field joined from web_user (e.g,. user_email and/or user_image). -1 inspiration not correctly clicksorting (null not at top)

- Timothy Khumpan

- "other"/world data now shows one non key field joined from web_user (user_email as per suggestion). Sorting remains the same, but at least inspiration doesn't display nullables at the top.

15 pts - HW07 Logon

Mar 31 at 5:11pm

-3 late

- Timothy Khumpan

Mar 31 at 5:11pm

-1 incorrect ajax call URLs (../); login should work on the server (logoff and getProfile do not)

- Timothy Khumpan

Mar 31 at 5:11pm

to avoid deductions on the project, do not required the user to click a button to initiate "log off" and "get profile". Use logic like ShowData where the ajax call is made immediately.

- Sally Kyvernitis

- Login and profile now correctly use React.useEffect to correctly display session data (Profile) on loading/reloading of page.

20 pts - HW08 Insert

Apr 16 at 10:58am

-4 late - 1: if "other" display does not show at least one non-key field from web_user table (e.g., email address and/or picture of the user). - 2 since your other table does not have a unique field, you did not show a user friendly database error message, e.g., for duplicate value for unique field.

- Sally Kyvernitis

- "other"/world display now shows one non key field joined from web_user (user_email as per suggestion). "other"/world display now has a uniqueness field (world_name) as per suggestion.

20 pts - HW09 Update

Apr 26 at 3:38pm

- 2: if "other" list display does not show the at least one non-key field from web_user table (probably email address which identifies which user). -1: Your ShowData components do not provide column sorting and filtering (all HWs are cumulative). some click sort for other table do not work

- Timothy Khumpan

- "other"/world display now shows one non key field joined from web_user (user_email as per suggestion). Still has sorting issues as mentioned previously.

10 pts - HW10 Delete (Not Graded in time)

- A majority of past changes were done here. Delete uses the ugly confirm prompt, so no extra credit. Other issues are as outlined in previous HW's (filter/search doesn't sort as intended). Lateness deductions are likely.
